To Whom It May Concern:

Testimonial for Mr. Toh De Kai

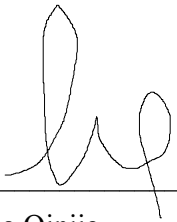

De Kai joined GovTech as an intern during his school vacation in May – July 2022. He worked in my team as a software engineer. Because of his good attitude and performance, he was offered to extend his internship and work part-time (2 days a week) from August 2022 to January 2023.

De Kai applied for this internship after he completed his first-year undergraduate study in NUS. Although he is a relatively junior student among other internship applicants, De Kai stood out with his outstanding technical skills in technical test. I am surprised to know that he already completed multiple internships in other companies before GovTech, e.g. Skilio and Zalora.

De Kai is humble, hardworking and keen in learning. He picked up Python programming through online learning. During his internship, De Kai worked on a few in-house full-stack projects. He was assigned several tasks to implement backend process and web services. He has demonstrated his technical skills in completing these tasks. He is organized in his tasks in-hand and is able to work with minimal supervision. He is able to get along well with other teammates during his internship.

With De Kai's personality and strong technical ability, I strongly believe that he has great potential in his future career. Any opportunities for him to broaden his experience and knowledge would be of great help for him to grow.

If you need any information, please feel free to contact me.
